

complete home automation solutions

introduction to home automation

Home automation represents a lifestyle enhancement by integrating home systems into a unified intuitive solution. By bringing technologies together which have been traditionally controlled through individual interfaces, a home can be created which is both comfortable and intelligent.

I-SEC Solutions specialise in complete home automation including lighting control, home cinema, audio visual distribution and digital surveillance. We offer tailored automation and integration solutions for architects, interior designers, developers and home owners alike.

'home automation brings simplicity to your home'

integration

I-SEC Solutions have considerable experience within property development and interior design and can utilise this knowledge to help you seamlessly integrate solutions within your project. From conception to completion, whether it be a full custom install for a new build or a property undergoing renovation, I-SEC Solutions can oversee the whole project or collaborate with interior designers, architects and developers on a consultancy basis.

We can also supply all manner of home entertainment equipment including high end hi fi products, music servers, speakers, screens and displays.

lighting control

The best restaurants know that comfortable lighting levels are the secret of a great dining experience.

You can also apply this philosophy to other areas of the home, by incorporating intelligent lighting that can set the mood of your home at the touch of button. ISEC Solutions can provide lighting control for a single room solution. By utilising the latest in lighting control technology, you have the unlimited freedom to change the light that surrounds you. A dimmer in the dining room for instance, can set a warm and comfortable mood by dimming the lights to complement the candlelight, turning every meal into a special occasion.

'comfortable lighting levels are the secret of a great dining experience'

Alternatively, we can design and implement a whole house solution, giving you total control of your house at the touch of a button. Intelligent lighting controls can be specified which detect when you arrive home from work and set the lighting to preset levels. Mood settings can also be applied which adjusts the lighting levels, for example, an assigned entertainment button can be incorporated which could set the mood for a party by lowering the lighting levels in the house, increasing the lighting in the garden and turning on the hot tub for your guests.

An added benefit of using a combination of lighting controls and high efficiency fittings, also makes it possible to significantly reduce energy usage, saving money and playing an important role in the protection of the environment, now and in the future.

Bring all of these benefits together and make your life more productive, relaxed, secure and fulfilling.

home cinema

With the advent of digital technology, a home cinema system has now become one of the main requirements for our clients. It is now entirely possible to fully enjoy a true cinematic experience from the comfort of your own home. ISEC Solutions have access to the latest home cinema equipment from the major brands in the industry including Linn, Pioneer, Denon, Panasonic, InFocus to name but a few. This enables us to fully integrate a system into your home, which will be seamless and deliver superb performance.

Anything is possible, from a simple home cinema install with a plasma screen or projector through to a full cinema room with surround sound, in-wall speakers, intelligent lighting and custom seating.

'a multi room audio system should offer elegance, simplicity and superb hi fi sound'

multi room audio

Entertain friends and family or create a mood by filling a room or the entire house with music.

A multi room audio system should offer elegance, simplicity and superb hi fi sound. ISEC Solutions can seamlessly integrate a system into your home which realises all of these objectives.

Using the latest speaker and network technologies, a fully integrated audio distribution system can be discreetly installed, exceeding the expectations of even the most discerning customers. All systems consist of the highest quality components and offer an array of solutions for customers wishing to access audio from anywhere in the home.

home surveillance

Picture the scene, you are on holiday and your alarm has triggered at your home or business address. Using your laptop or internet ready phone, you can gain access to your security camera and investigate whether the police need to be alerted. Meanwhile your camera has automatically started to record the event on your PC and activated all the lights to come on.

This technology is now a reality and the applications are as far reaching as the technology itself. IP cameras, also known as Network cameras, are highly sophisticated digital cameras with a built in web server, suitable for indoor or outdoor situations. Utilising an internet connection to your premises, you can simply enter the IP address of your camera into your web browser and control your camera over the web. I-SEC Solutions specialise in the supply and installation of Network CCTV Cameras.

'cameras can also be configured to send email notifications or SMS alert'

For homeowners wishing to install a security system as part of a total home automation solution, we can integrate the latest products within a complete custom install package, allowing live video to be viewed from any room in the house.

Cameras can also be configured to send email notifications or SMS alerts together with snapshots of an event whilst you are at work or on holiday. Some of the latest cameras can also be integrated with alarm systems to take snapshots if the alarm is activated, meaning you have the peace of mind that your property has the best 24 hour surveillance available.
